

How to Make Code Look Exactly Like Figma

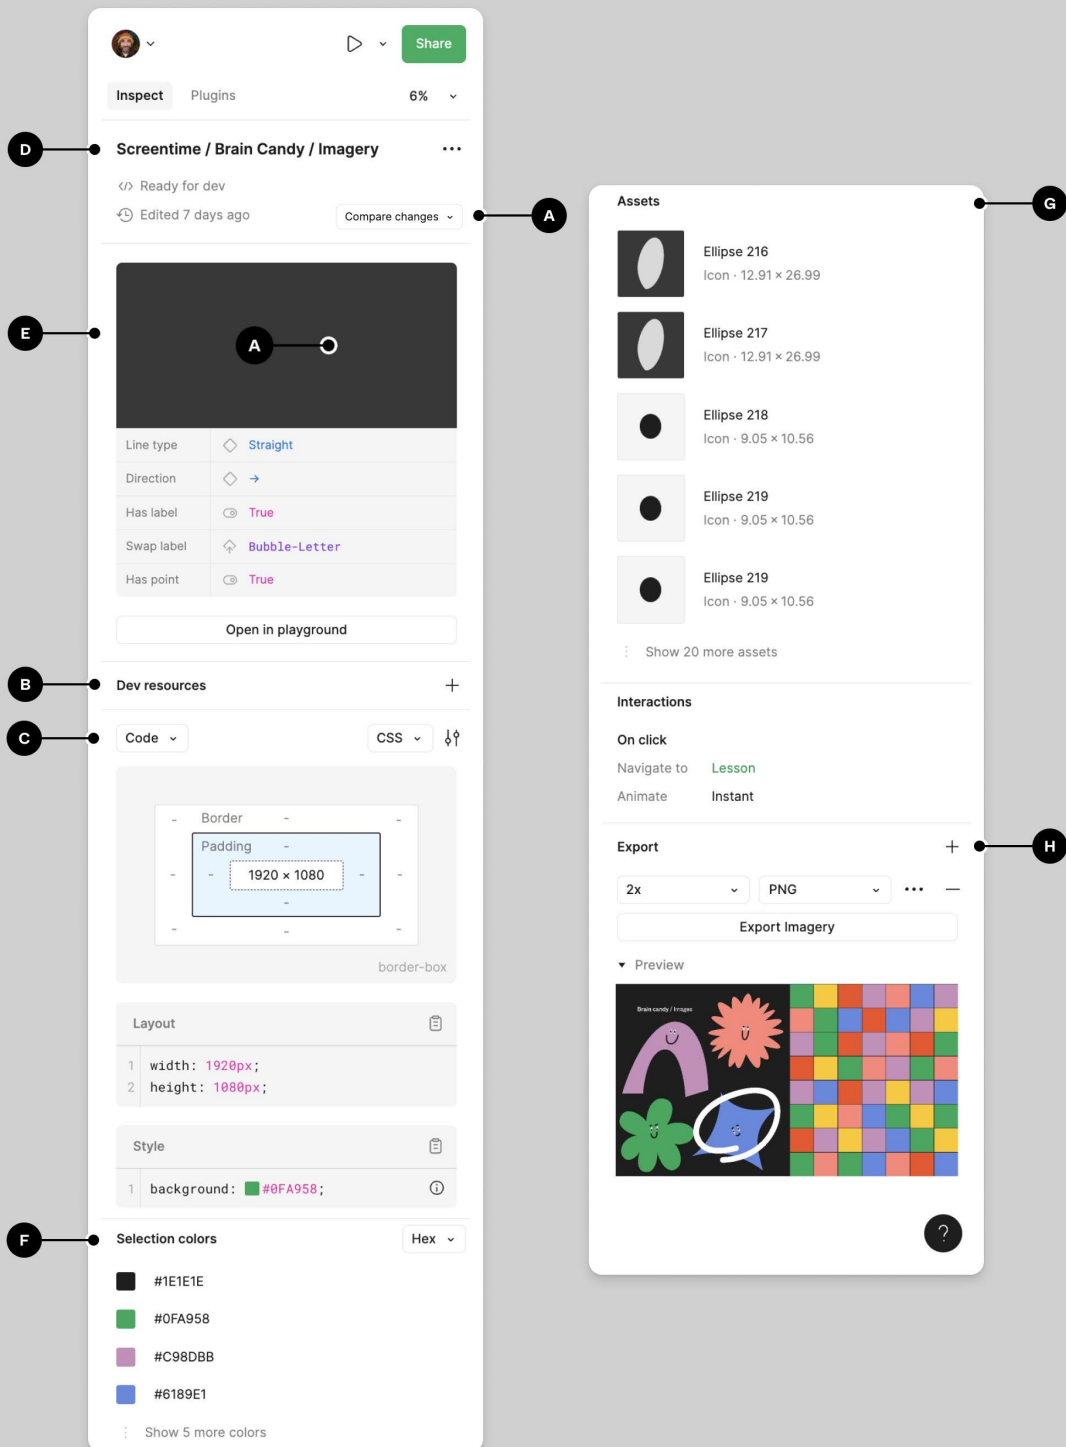

👉 Pixel perfect = no visible difference between Figma and your code

1. Always Read Values — Don't Guess

👉 In Figma, every element has exact values:

- Spacing (16px, 24px)
- Font (size, weight)
- Colors (#000, rgba)

Rule: Don't eyeball. Use the **Inspect panel** from FIGMA and copy values.

2. Spacing Must Match Exactly

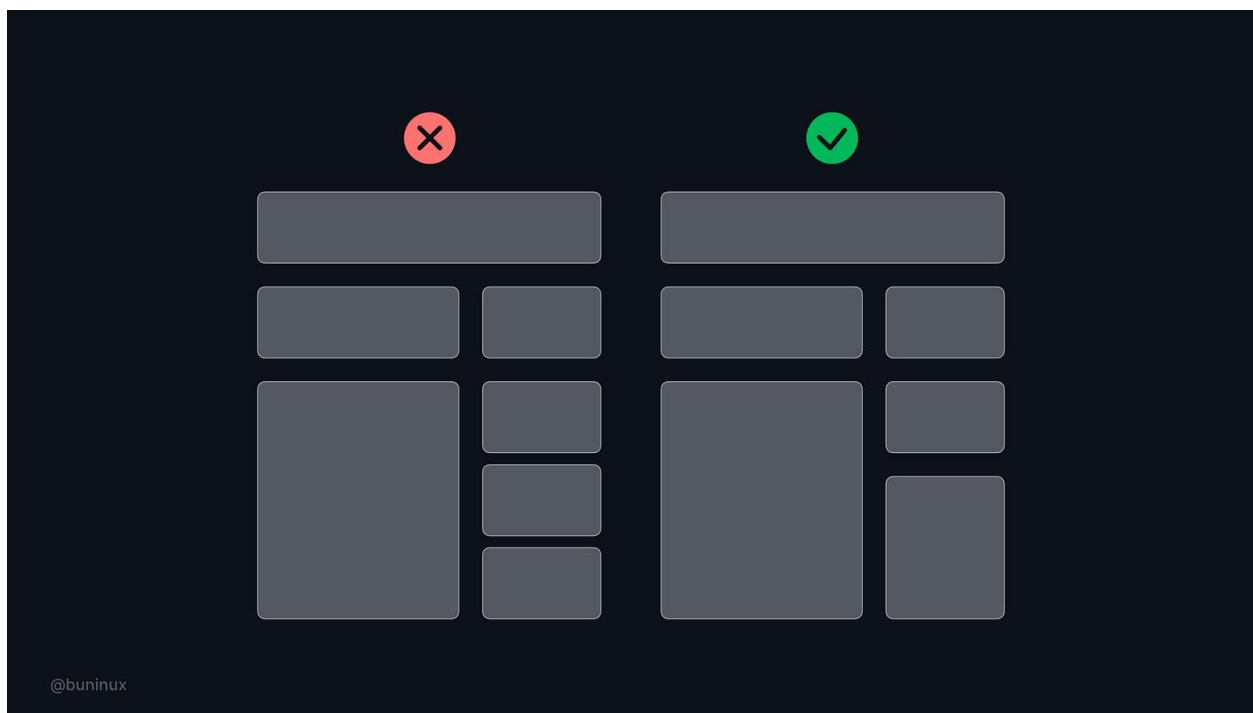

👉 Most UI issues come from spacing.

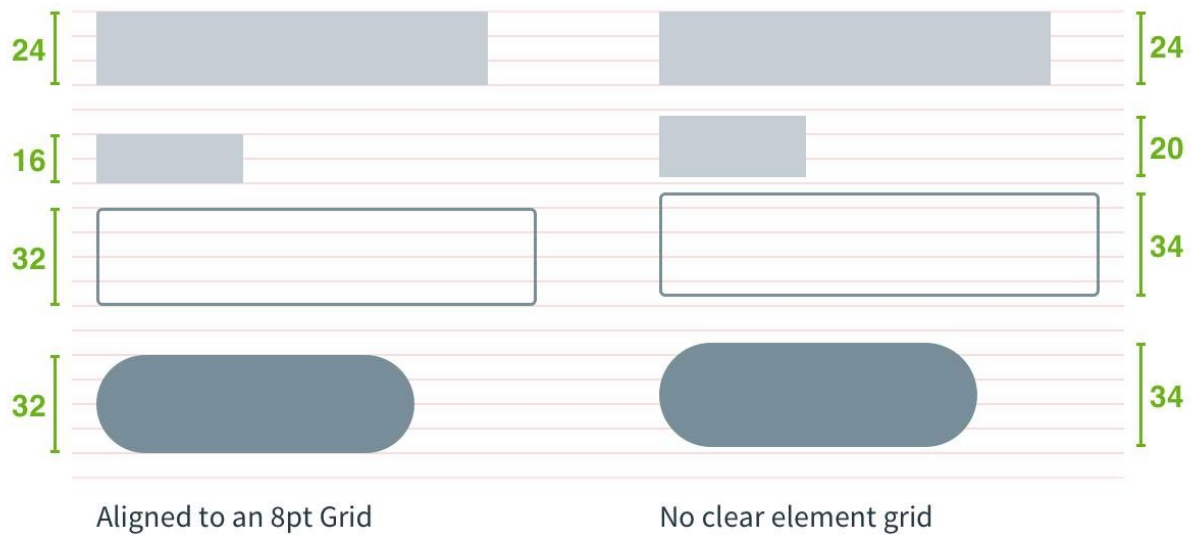

Check:

- Margin
- Padding
- Gap between elements

✗ 20px instead of 24px = wrong

✓ Exact same spacing = correct

Layout 01	8px	
Layout 02	16px	
Layout 03	24px	
Layout 04	32px	
Layout 05	48px	
Layout 06	64px	
Layout 07	80px

1px

20px

20px

3. Typography Must Be Identical

Match exactly:

- Font family
- Size (e.g., 16px)
- Weight (400, 600)
- Line-height

👉 Even small differences make UI look off.

Figma vs Browser render

If you zoom in and it gets blurry, I'm sorry. The browser render examples are screenshots for accurate comparisons.

20px container + 1px border = 22px tall container

Rendering without custom spacing

Browser render

Hello world jklgy

```
Container {  
  height: 20px  
  border: 1px solid red  
  (the browser default is outside)  
}  
Text {  
  font-family: Source Sans Pro  
  font-weight: 400  
  font-size: 16px  
  line-height: 18px  
  align: middle  
}
```

Figma render overlayed

Hello world jklgy

Figma render without adjustments

Hello world jklgy

```
Container {  
  height: 20px  
  border: 1px solid #BD9FE4 outside  
}  
Text {  
  font-family: Source Sans Pro  
  font-weight: 400  
  font-size: 16px  
  line-height: 18px  
  align: middle  
}
```

Replicating the browser with custom spacing

Browser render

Hello world jklgy

Figma render overlayed

It is time to take action to reduce waste and protect the environment. Waste has significant damage to our environment, increasing resource consumption and leading to pollution and health issues.

Line height

Line height, or leading, is a crucial typographic element that determines the vertical spacing between lines of text, impacting both readability and aesthetic appeal. Typically set between 1.2 to 1.5 times the font size, appropriate line height prevents text blocks from appearing too crowded or disjointed, thereby facilitating ease of reading.

Line height

Line height, or leading, is a crucial typographic element that determines the vertical spacing between lines of text, impacting both readability and aesthetic appeal. Typically set between 1.2 to 1.5 times the font size, appropriate line height prevents text blocks from appearing too crowded or disjointed, thereby facilitating ease of reading.

Mixing **fonts**
will ruin **your UI.**

Stick to one
font instead :)

4. Colors & Styles Must Match

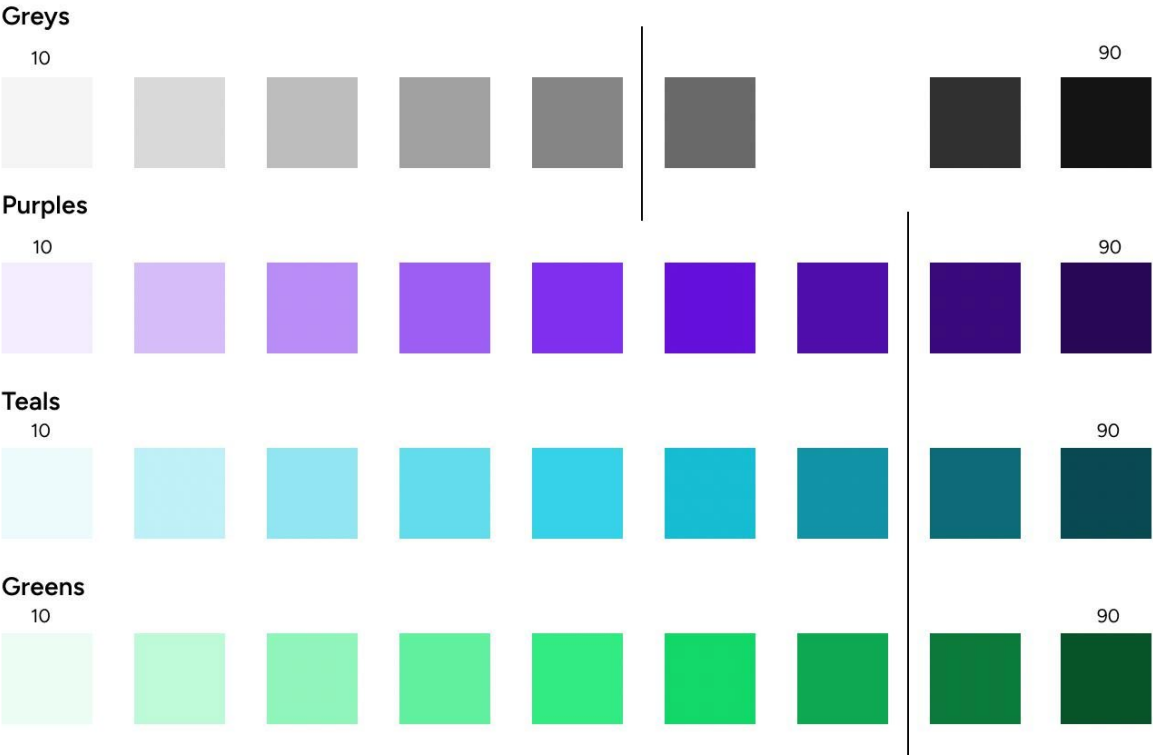

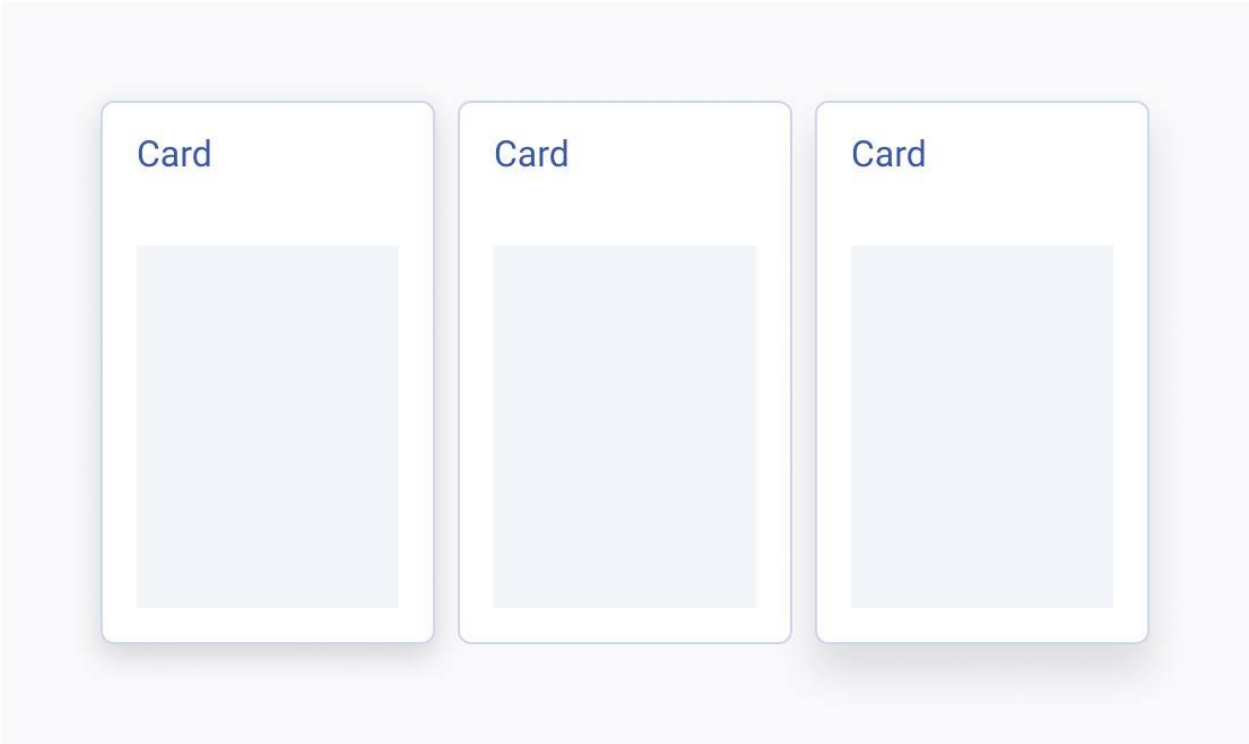

Check:

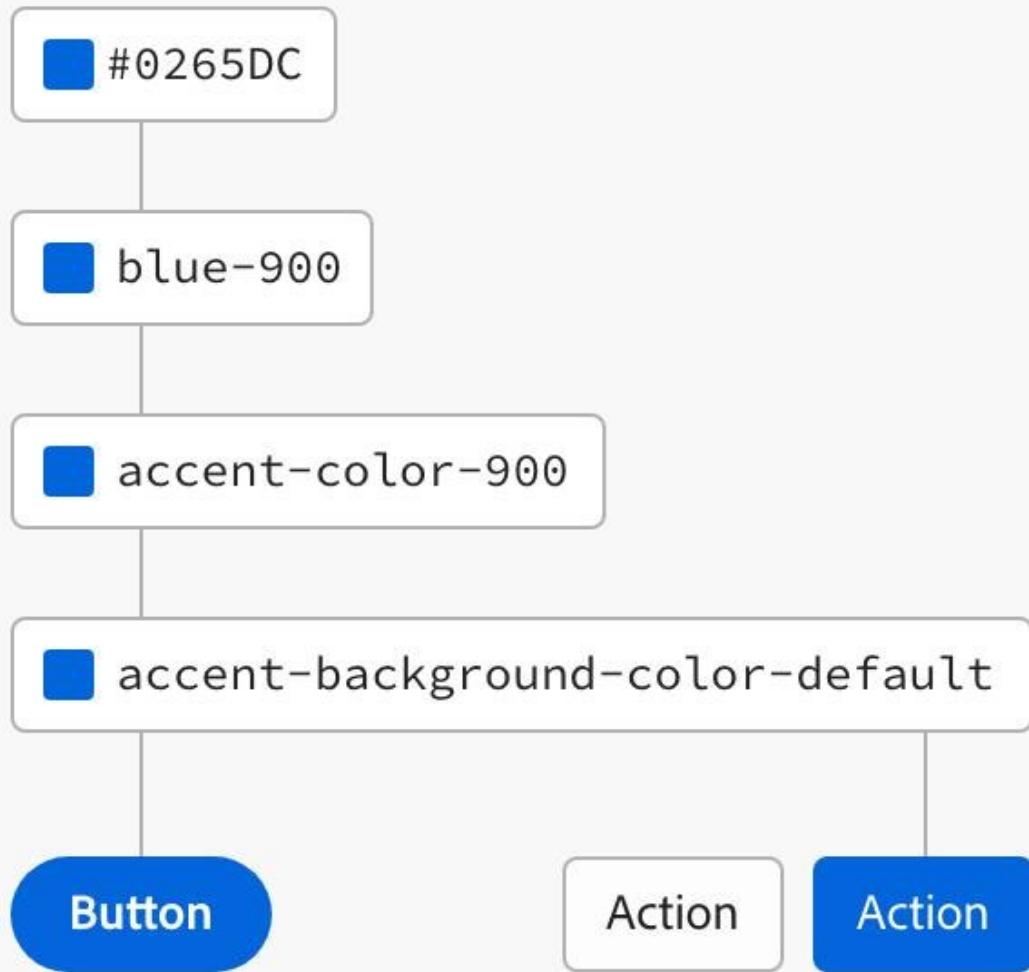

- Exact color codes
- Border radius
- Shadows

✗ “Looks similar” is not acceptable

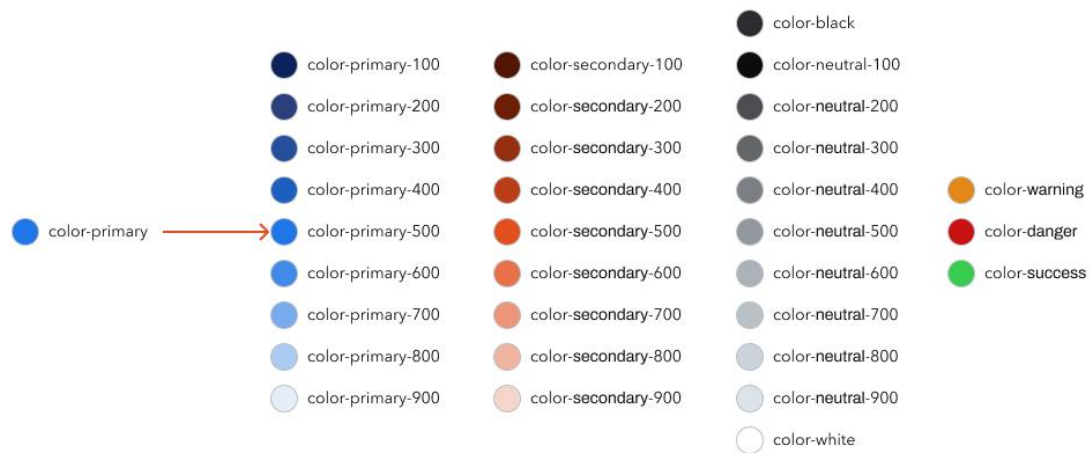

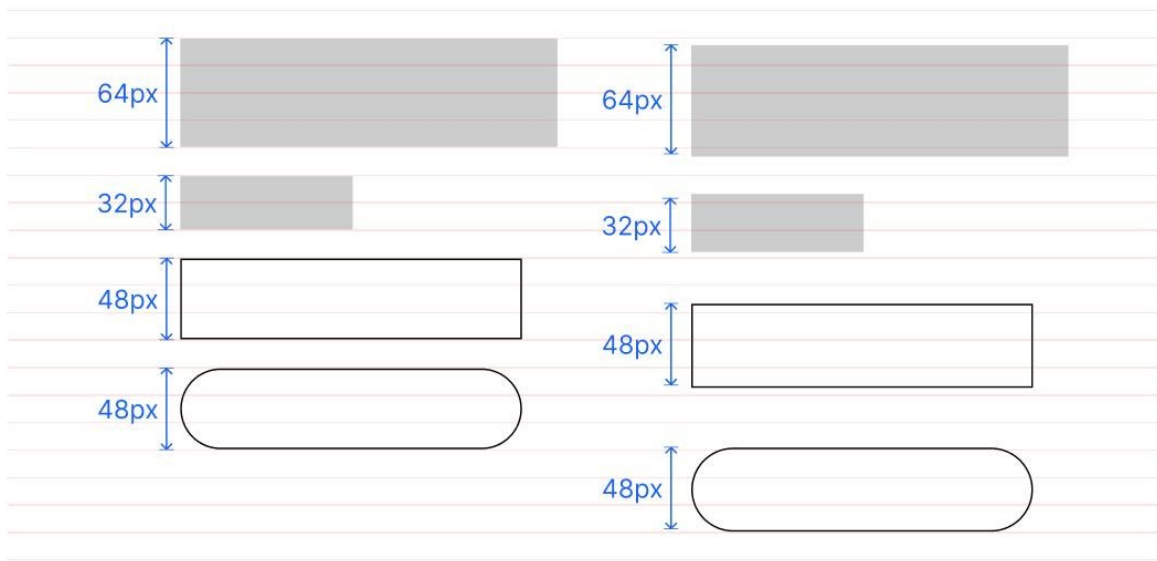

Expanding our token palette

5. Alignment & Layout

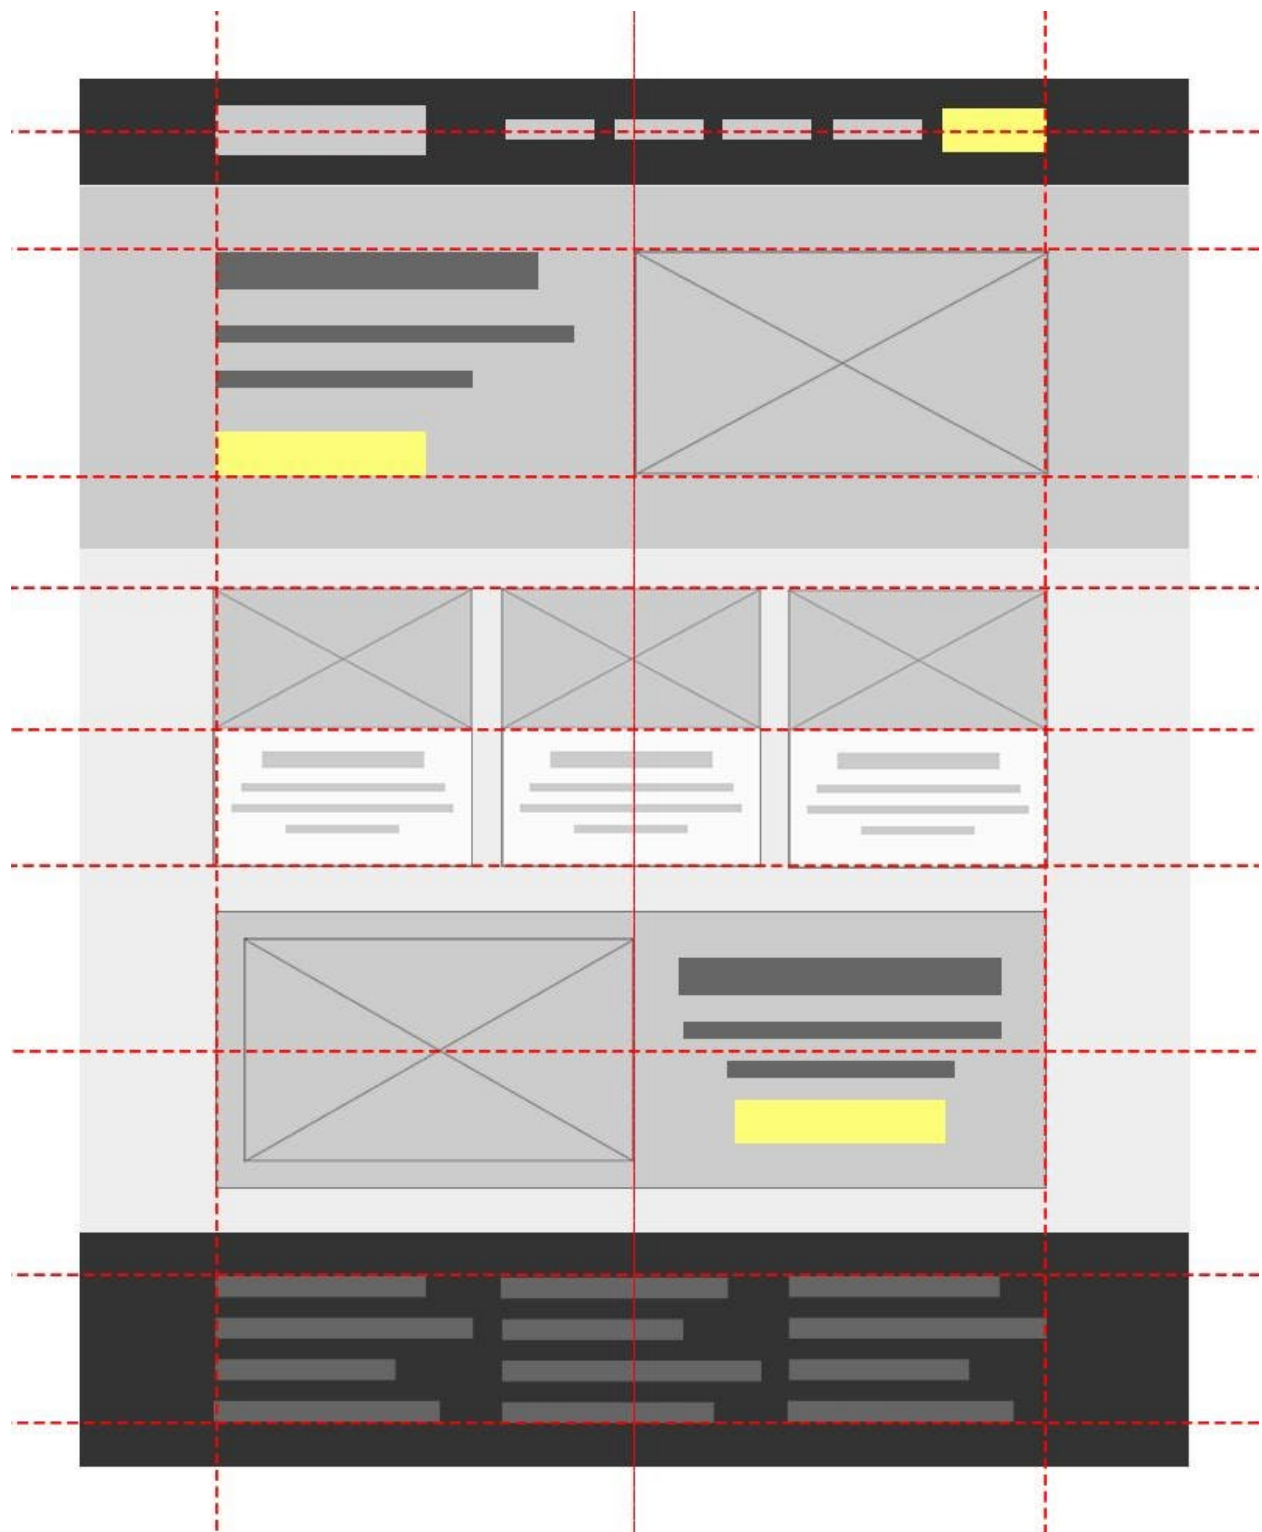

👉 Everything should align to a grid:

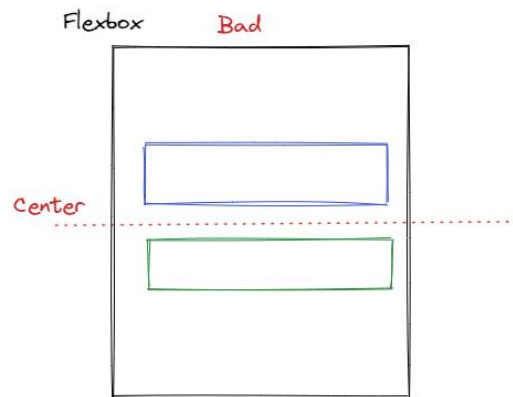

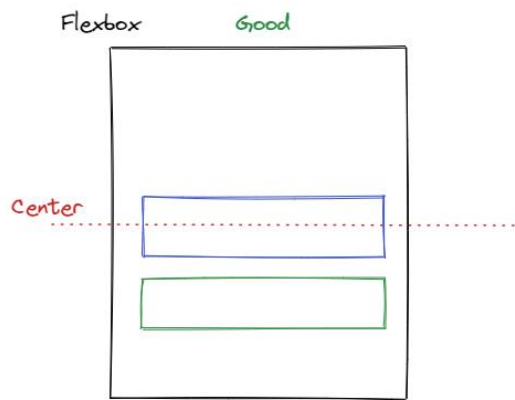

- Same left/right edges
- Equal spacing
- Proper centering

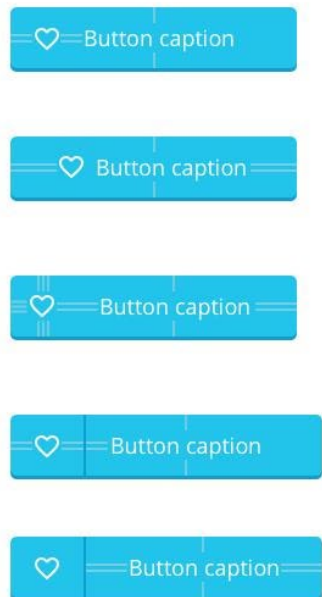

Aligned to a 16pt grid

No Clear element grid

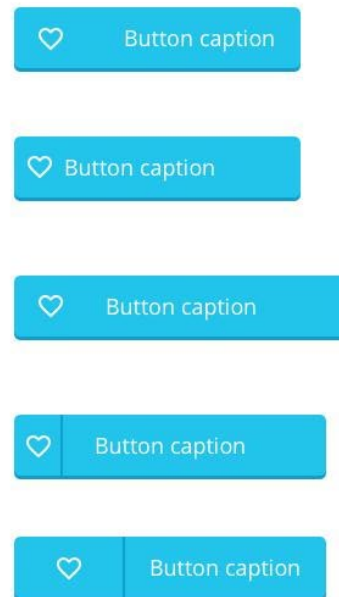

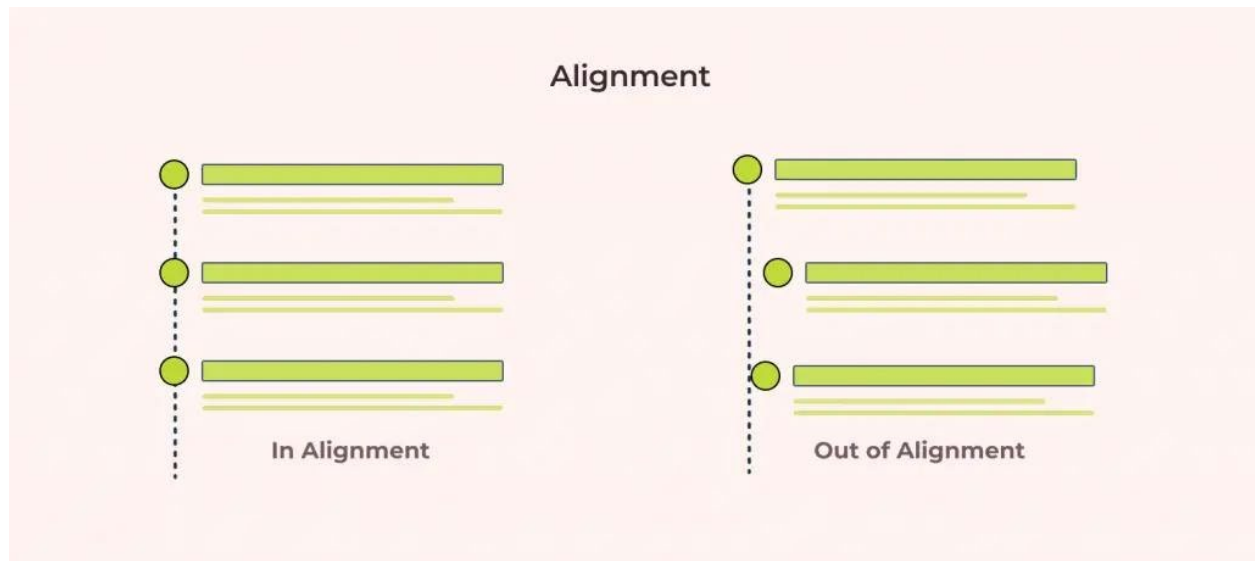

Yes

No

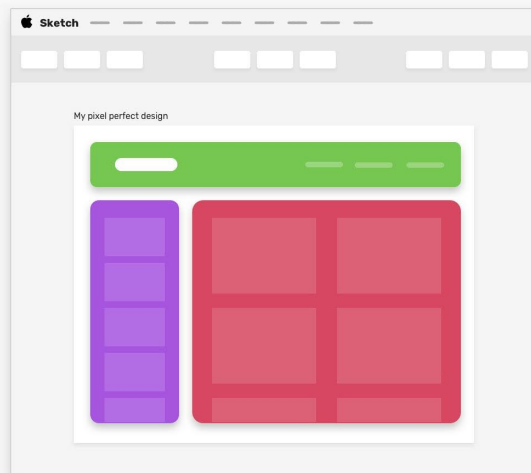

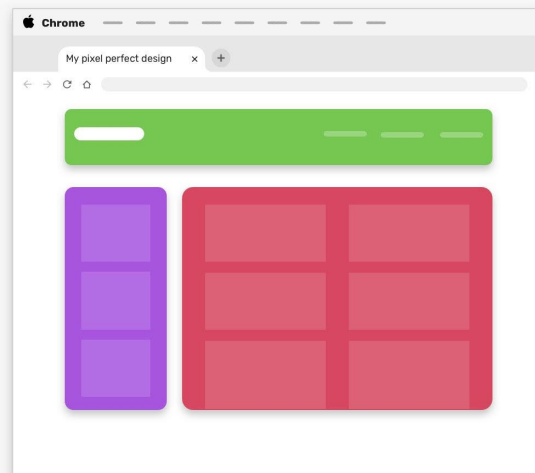

6. Compare Your Work

After coding:

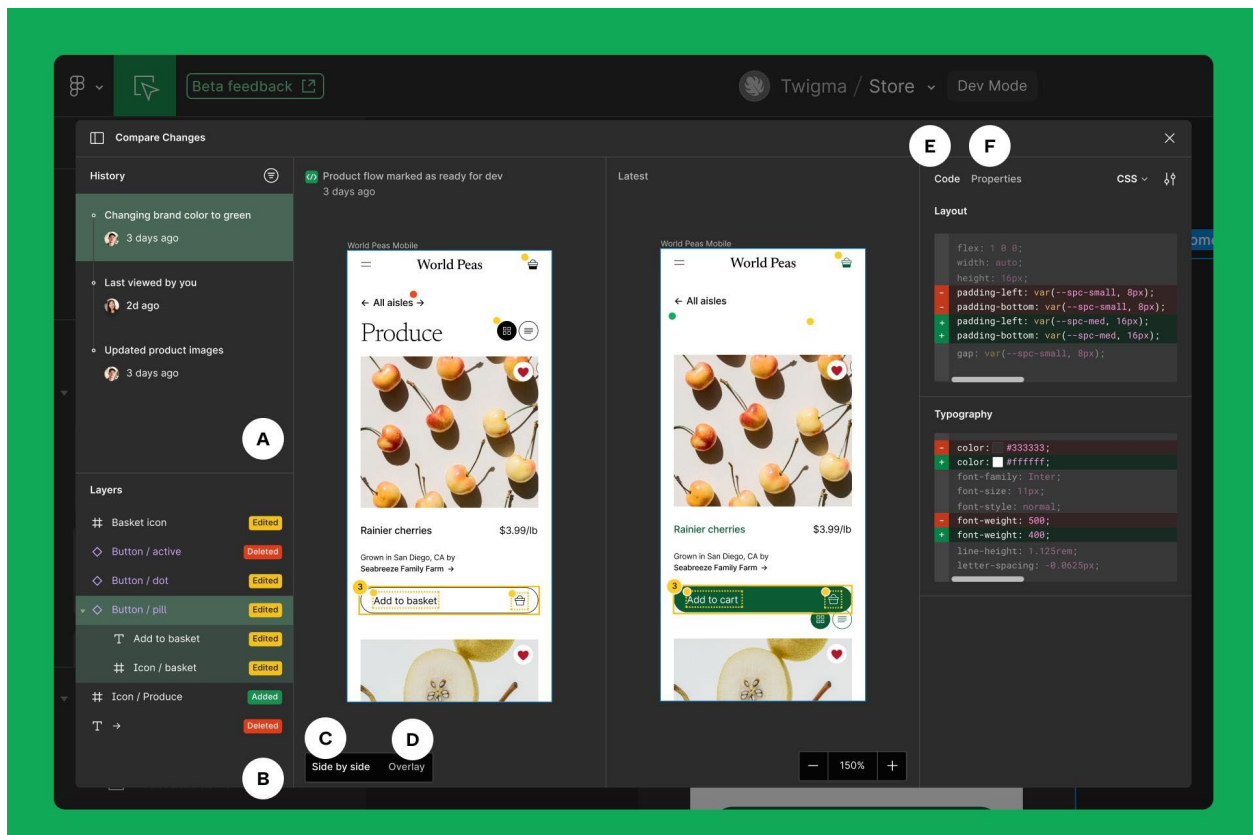

- Put Figma and your UI side by side
- Or overlay them
- Fix differences
